Re: Appeal of Denied Claim — Member: Marcus T. Oyelaran | Plan ID: 55217788

To the Clinical Review Committee,

I am writing on behalf of my patient, Marcus Oyelaran (DOB 11/02/1971), to formally appeal the denial of coverage for continued outpatient physical therapy following his lumbar discectomy performed on June 3, 2026. The claim (reference DEN-2026-19042) was denied on the basis that the requested 12 additional sessions exceeded the plan's standard post-operative allowance.

Mr. Oyelaran has shown measurable but incomplete progress: his Oswestry Disability Index improved from 58% at week 2 to 34% at week 8, and he continues to report significant functional limitation in prolonged standing and lifting, both essential to his occupation as a warehouse supervisor. His physical therapist's most recent progress note (attached separately, dated August 12, 2026) documents continued gains in range of motion and core stability, and recommends an additional six-week course to reach functional discharge criteria.

Discontinuing therapy at this stage carries a substantial risk of regression and re-injury, which would likely result in a far more costly intervention down the line. I respectfully request that the committee reconsider this denial and approve the additional 12 sessions as medically necessary.

Sincerely,

Dr. Wendell Ashe, MD — Family Medicine — NPI 1962004471
